

Aerocom's AC24M Multi Station System

The AC24M System is available for a variety of applications. Most commonly it is ideal for the secure two-way transmission of cash and documents from a point of sale station to a safe room or bookkeeping area in a retail environment.

This system has two operating modes by use of a slide gate: Day and Night Mode. While in Day Mode, leave the slide gate closed so the transferred carriers remain in the receiving station. An arrival signal will alert the bookkeeping attendant that the carrier has landed. At days end, switch the slide gate to the open position and carriers will drop into a safe for retrieval the next morning. Each transferred carrier will be traceable with detailed audit information.

Station Options: Slide & Box

Aluminum

Stainless

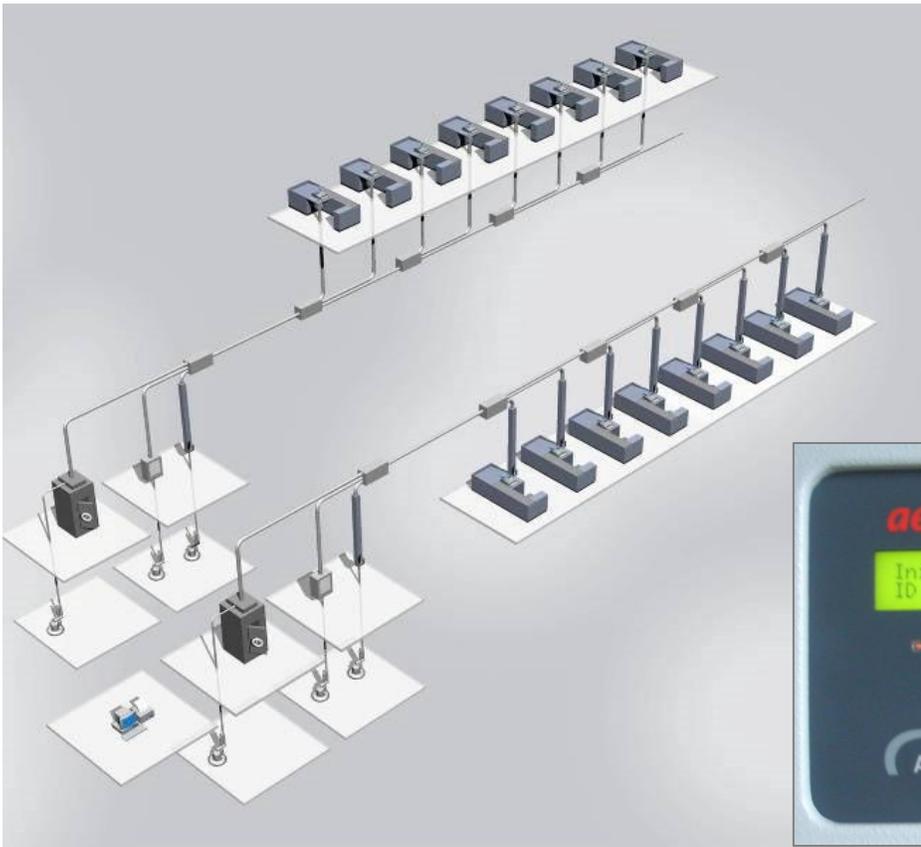

PVC

Steel Box

Aerocom's AC24M Multi Station System

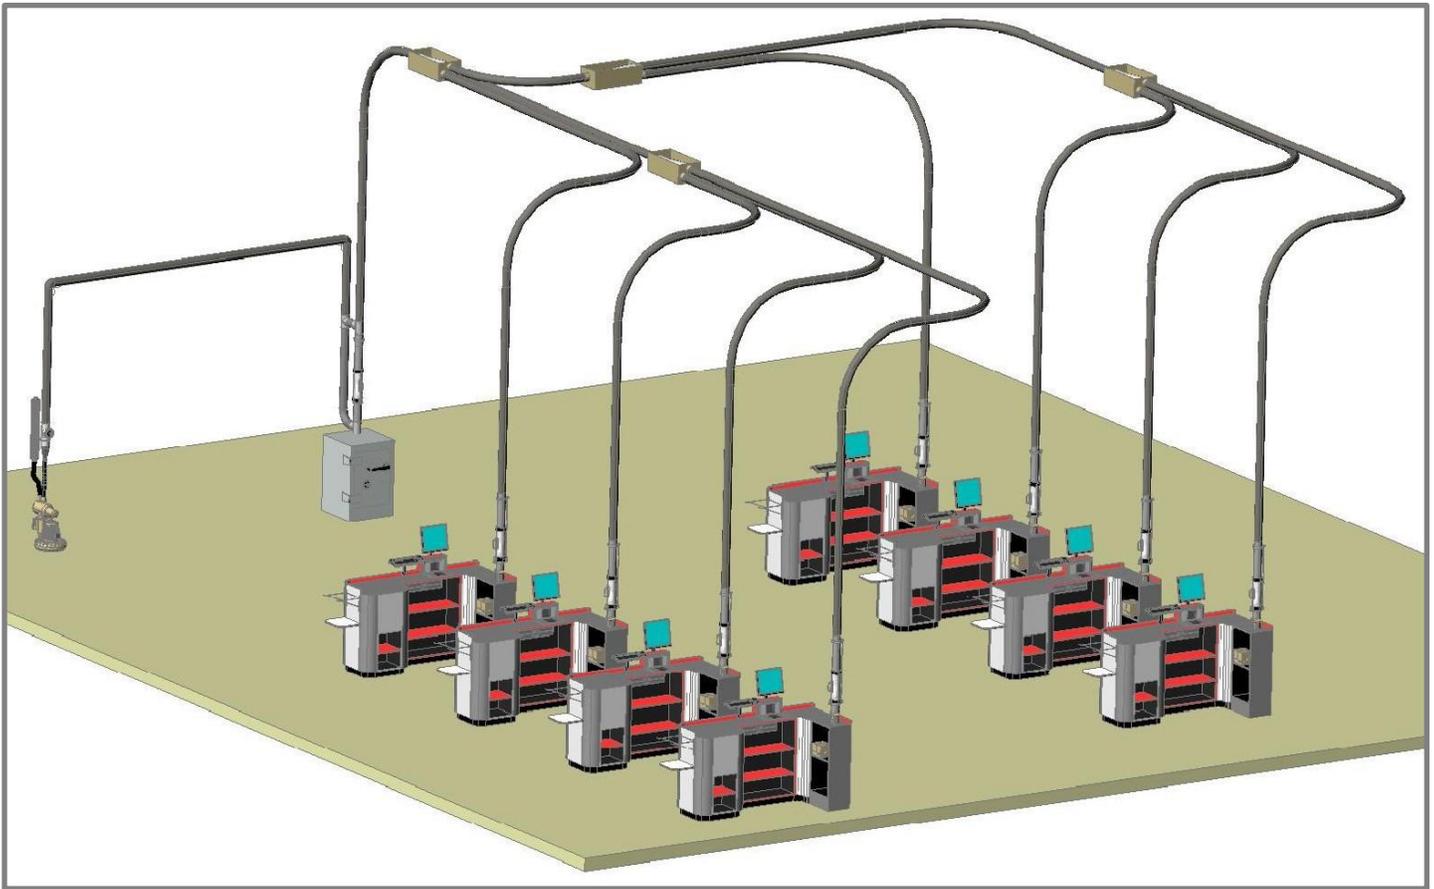

Up to 61 sub-stations transfer cash and documents to bookkeeping with audit trail capabilities.

Features:

- Fully automatic, variable, microprocessor controlled system.
- The master station is microprocessor controlled, eliminating the need for additional PCs and monitors.
- Several station types are available.
- Provides soft carrier landing.
- Technician service mode allows for remote interaction to resolve rare system conflicts.
- Carriers return to the master station in the event of power interruption.
- Printable transaction log, recalling the last 120 transactions.
- Printer can be set to print out trouble codes.
- Automatically clears the system to prevent possible carrier collisions.
- Available in multiple tubing sizes ranging from 4" to 6" PVC, Steel, and Aluminum tubing.

Aerocom's AC24M Multi Station System

System Details

Maximum number of stations:

1 master station with up to 61 sub-stations

Maximum number of lines: **1**

Diverter: **2-way / 3-way**

Payload: **up to 5 pounds**

Speed: **25' per Second**

Operation mode: 2-way reversing system

Carriers can be transferred from the master station to any of the sub-stations (up to 61 sub-stations). Sub-stations cannot perform transactions with other sub-station for secure audit accountability.
